

B721.221: ORF calls predicted from RNA-seq alone vs 327 M MEASURED Ribo-seq footprints -- 75% of the assay's own self-agreement on F1, and the non-canonical gap is real but half as large as it looks

A Predicted vs measured (bars: precision / recall^{1/2} / F1^{1/3})

B Recall by class, vs the ceiling for each

C Against the RIGHT denominator (bars as in A)
