

Trained on 7 human cell types (69 Ribo-seq libraries); Hepatocytes (5 libraries) held out entirely

A Training composition -- cell type (Ribo-seq libraries)

B What the model sees

Universe

84,472 transcripts
protein-coding + lncRNA, salmon TPM ≥ 1 ,
 $\leq 10,000$ nt, chrM excluded

Inputs at inference

one-hot sequence (4 ch)
ORF track (5 ch: frame 0/1/2, start, stop)
RNA-seq coverage (1 ch)

Target

per-nucleotide Ribo-seq P-sites

Standalone arm

NO Ribo-seq at inference --
the arm the application uses
