

Start-context weights: learned vs empirical vs heuristic

learned-vs-empirical Pearson r = 0.807 over 7 context positions (per-position centered)

V3 LEARNED start-context kernel (Conv1d 4x10) bias=+0.13

V2 EMPIRICAL Kozak PWM (log2-odds, annotated CDS ATG starts)

V0 HEURISTIC $kz = 0.5*[purine@-3] + 0.5*[G@+4]$
