

a

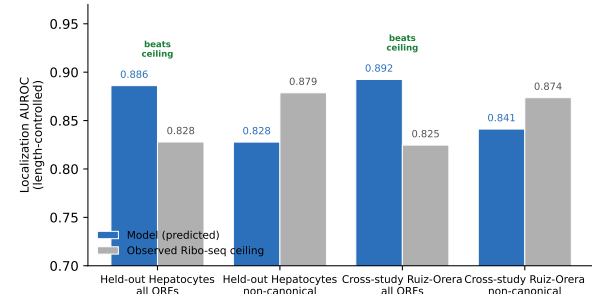

Observed vs predicted Ribo-seq P-site profile -- held-out Hepatocytes (one-hot orf_v2_mamba4, tissue never seen in training)

**b**

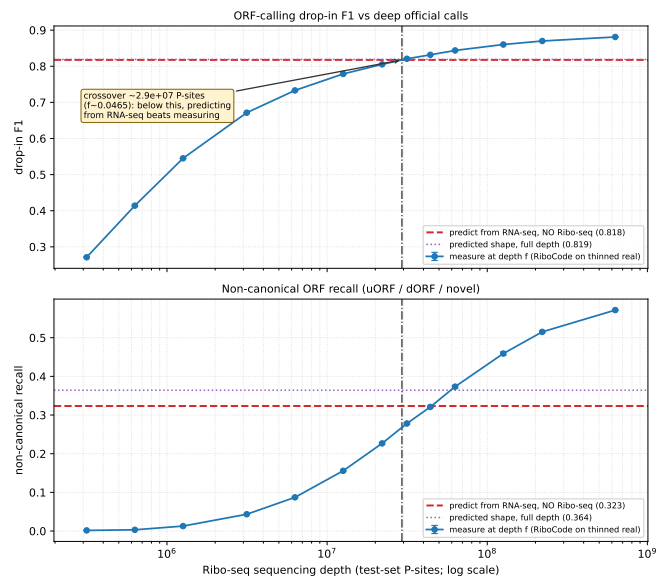

Predicted profile reproduces the ORF caller's own calls (held-out Hepatocytes)

**c**

Predicted translation localization matches/beats the Ribo-seq ceiling

**d**

Predict vs measure: Hepatocytes held out, full test-set depth 6.30e+08 P-sites

**e**

Even cross-tissue generalization (9-fold leave-one-tissue-out)
